

Statistics - Abortion in Canada

Updated March 27, 2020

The following data were compiled from Canadian Institute for Health Information (CIHI) annual statistics. See [Links to Sources](#) for each year's stats, including footnotes that explain and qualify the data.

In 2007, CIHI took over the collection and compilation of abortion statistics from Statistics Canada (StatsCan). For stats prior to 2007, see [Links to Sources](#).

Hospital reporting of abortion numbers is mandatory, but clinic reporting is not. However, all clinics do report for most years as far as we know (despite some CIHI footnotes to the contrary). Known exceptions are noted with stars in the first table.

* **2018/2017/2016/2015/2014:** Fredericton NB clinic did not report. **2014/2013:** At least one BC clinic did not report. **2013:** Newfoundland clinic did not report. **2012:** At least two BC clinics did not report. **2008-10:** One BC clinic did not report.

** Ontario started reporting unfunded clinic abortions for 2015, and new totals also became available for 2011 to 2014. Strikeouts in the table were the previously reported numbers. The apparent increase represents a change in reporting, not an actual increase. See page 5 for explanation on unreported Ontario abortions.

Gestational Age and Complication Rates (hospitals only and excluding Quebec)

Description	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018

Abortion rates at 21+ weeks, and total estimated abortions including unreported ones

Abortion clinics that are not affiliated with a hospital do not perform abortions past 21 weeks (often stated as 23 weeks from last menstrual period, “LMP”). About one-third of reporting hospitals don’t report details on gestational ages, presumably all in Quebec, but we can assume that the proportion of 21+ week abortions are similar for that one-third. Therefore, taking into account the total estimated numbers of abortions for 2018: **85,795***– the estimated percentage of abortions at 21+ weeks including Quebec is **one percent** (659 + 220 for Quebec = **879** abortions at 21+ weeks).

(If we add a rough estimate of about 150 women a year travelling to the U.S. for an abortion at 21+ weeks, that changes the percentage to **1.16%**. This estimate is based on about [25 women a year from Ontario](#) who are funded to go down to the U.S., adding in estimated numbers for women across Canada, whether funded privately or by government.)

* Adding in estimated missing 2018 numbers from New Brunswick: **600**, based on past numbers and email communication with the clinic.

Abortion rates by 12 weeks

Only hospitals report abortion numbers by gestational limits. The 2018 CIHI data show that 15.4% of hospital abortions are done after 12 weeks. For clinics however, some do not go past 16 weeks, while less than a third go as far as 20 or 22 weeks (see <http://www.arcc-cdac.ca/list-abortion-clinics-canada.pdf>). Our estimated calculation for 2018 is as follows:

3,002	Number of hospital abortions after 12 weeks (15.4%)
588	Estimate of number of hospital abortions after 12 weeks in CIHI’s “Unknown” category (using 15.4% estimate)
5,870	Number of clinic abortions after 12 weeks, based on a liberal estimate that 10% of all clinic abortions (58,697) occur after 12 weeks.
9,460	Total estimated abortions done after 12 weeks.

Therefore, based on the total number of 85,195 reported abortions, an estimated **89%** are done by 12 weeks.

Annual abortion rate per 1000 women of childbearing age (15-44)

CIHI does not publish the annual abortion rate per 1000 women of childbearing age, even though this is a standard measurement used throughout the world. We have calculated it as follows:

7,285,452: Canada’s population of women in the age group 15-44, from CANSIM, 2019:
<https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?pid=1710000501&pickMembers%5B0%5D=1.1&pickMembers%5B1%5D=2.3>

11.7 / 1000 Annual abortion rate per 1000 women aged 15-44, based on official CIHI data for 2018: **85,195**

Unreported abortions in Ontario

- In 2015, CIHI finally started reporting the unreported abortions from Ontario, going back to 2011. See Note and Table below.
- **Previous data:** In 2010 in Ontario, 18,402 abortions were done by non-funded clinics and doctor's offices and not reported to CIHI (as FOI'd by an [anti-choice activist](#)). In 2014, there were 21,725 unreported abortions in Ontario ([anti-choice source](#)). This ongoing phenomenon began in the 1990s, but these abortions had never been counted by StatsCan or CIHI until now. They are all (or virtually all) first trimester abortions. Some other provinces also have small numbers (not statistically significant) of unreported abortions occurring in doctors' offices. These abortions are billed by the individual doctors to provincial Medicare, so provincial records exist for them but they are not shared with CIHI.
- **Why did Ontario have so many unreported abortions?** The large majority of unreported abortions occur in Ontario because the NDP Bob Rae government only funded the five Toronto clinics that existed around 1990, as well as the Ottawa Morgentaler Clinic. (The remaining three include Toronto Morgentaler Clinic, Cabbagetown Women's Clinic, and Choice in Health Clinic.) They were funded as "Independent Health Facilities," a Liberal program that was completed by Rae's NDP government. Since then, several more abortion clinics have opened, but as they fell outside the IHF program, they weren't funded. These non-funded clinics include the Bloor West Village Womens Clinic, Brampton Women's Clinic, Mississauga Women's Clinic, and Women's Care Clinic in Toronto. However, patients pay only the costs that are apart from the doctor's fee, which is paid by OHIP.
- But the Ontario clinics **should be fully funded** by the Ontario Ministry of Health. The 1995 clarification to the *Canada Health Act* by Health Canada (<http://www.arcc-cdac.ca/backgrounders/HC-letter-Jan1995.pdf>) instructed all provincial/territorial Health Ministers to fully fund any private clinic doing medically required procedures, and that user fees charged directly to the patient were illegal. The Progressive Conservative government under Mike Harris did not abide by these requirements, and Ontario has been violating the *Canada Health Act* ever since.

Note and table from [CIHI 2015 report, Table 1:](#)

"To improve the accuracy of Ontario's reported abortion volumes, the methodology has been updated. Total volumes were derived by using the total abortion volumes reported to the National Physician Database (NPDB) at CIHI and adding both hospital-based abortions for non-Ontario residents and hospital-based medical-method-only abortions for Ontario residents (as reported to the Discharge Abstract Database and the National Ambulatory Care Reporting System). For Ontario, volumes reported in the column Number of induced abortions reported by clinics include services from non-hospital settings. Volumes for non-hospital settings (clinics/surgical facilities/physician offices) were estimated using the total abortion volumes as described above and subtracting hospital-based abortions. This methodology results in induced abortions occurring in physician offices and in clinics being included in non-hospital settings volumes. This estimation approach for non-hospital volumes was required because information on the location where the service is rendered (e.g., clinic, hospital, physician's office) may not be included in the NPDB data."

Year	Number of induced abortions reported by Ontario hospitals	Number of induced abortions reported by clinics in Ontario	Ontario total	Canada total
2011	12,483	31,951	44,434	108,844
2012	12,137	32,499	44,636	100,958
2013	11,408	32,457	43,865	102,446
2014	10,977	31,066	42,043	100,194
